Projects Completed

BMI Calculator

Using HTML5,CSS3,and javascript created an user interface that allow user to choose their height and weight manually using the range and then their BMI is calculated using javascript to show the result.

Just Call Application

Created an application using android studio in java programming language in which the application used to contact various service provider in different fields. Used sqlite database to save the information and retrieve it.

Database Management System for Blood Donation System

Creating database for blood donation management system with normalized tables using mysql.Managing all donors and receivers history in database and retrieving the useful queries like active donors from the history of donors.This is useful for hospital who is in need of blood.

Simple ATM console

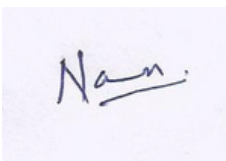

Using C# created a simple ATM machine which already has some card holder details in objects. This console allow users to deposit money and withdraw and then check balance operations.
